

Commercial Glazing from GLASSOLUTIONS

Your local glazing expert, globally backed

As part of the international Saint-Gobain Group - a world leader in construction markets - GLASSOLUTIONS has access to extensive experience and expertise relating to glass and the broader building environment.

We are the UK's largest processor, distributor, installer and repairer of glass and glazing systems, with a network of more than 20 production sites, distribution branches and operations centres.

Our capabilities span the entire glass and glazing supply chain which ensures that customers are presented with the widest range of glass product and service options, with everything from toughening and laminating, right through to domestic and commercial sealed units and the supply of specialist products which offer enhanced acoustic and solar control.

We can source the components including trays, bolts, brackets, bosses and the specified single or double glazing

requirements for the most complex glazing systems. Plus, with extensive in-house connections within Saint-Gobain, we have access to a world-wide supply network for these types of products.

For more information and to discuss the most suitable solution for your needs contact GLASSOLUTIONS today on **0333 321 6567**, or email commercialprojects@glassolutions.co.uk

GLASSOLUTIONS glazing experts offer glass and glazing options to suit a wide range of commercial applications; our fabrication and installation teams are experienced at delivering new build, renovation and refurbishment projects, along with a national reactive glazing service.

Your glass. Our world.

Your glass. Our world.

Commercial Glazing from GLASSOLUTIONS

Being part of the UK glazing industry's largest manufacturing, processing, installation, distribution group, GLASSOLUTIONS offers glass and glazing options to suit the widest range of commercial applications backed by comprehensive technical know-how.

Our fabrication and installation teams are equipped to handle virtually any application. We can provide multiple fenestration solutions with the widest range of glazing options. These ensure we deliver commercial buildings with the

optimum mix of energy efficiency, acoustic insulation, solar control, safety, security and aesthetics.

The GLASSOLUTIONS service includes design drawings, structural calculations

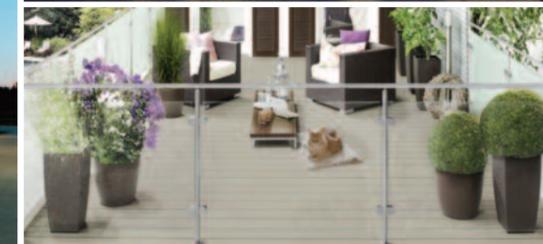

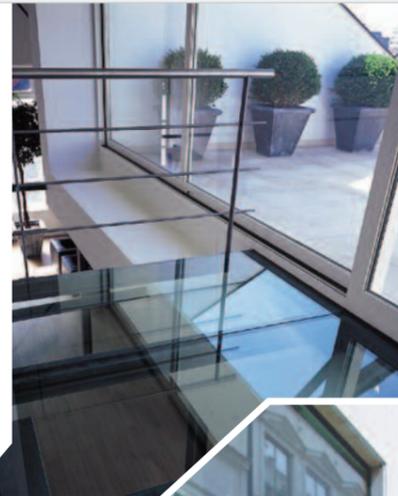

and installation by a fully qualified, experienced installation team, giving customers an integrated service with added peace of mind for refurbishment or new build projects.

Working closely with architects, specifiers and contractors, our commercial glazing specialists ensure that the design and installation of bespoke internal and external glass and glazed structures are to clients' exacting specifications. These include structural glass extensions,

staircases and balustrades, glass doors and floors in large and smaller scale projects.

Our products are suited to both internal and external commercial applications, including:

- façades
- shop fronts
- doors
- roofs
- elevators
- stairs and floors
- balustrades
- partitions
- countertops
- mirrors
- wall cladding

Commercial reactive glazing experts

Our directly employed network of engineers operate a 24/7, 365 day emergency glazing service. On callout, we make safe the premises, before replacing damaged and broken glazed systems and locks. Working in partnership with our clients, we also plan a comprehensive service including full building assessment, property survey and balustrade inspections.

Working at height

Our teams are fully trained and skilled in replacing high level glazing - including hard-to-reach locations. A full risk assessment is always conducted to ensure the well-being of members of the public, building users, fellow workers and our engineers, and we comply with current health and safety regulations.

Unique innovations

We also provide unique complete solutions which are designed with specific applications in mind, including:

VS-1 - a new type of curtain walling

A mullion-only system, VS-1 has no transoms to break long vertical sightlines, giving architects, façade engineers and clients the freedom to explore complex and original designs.

TECDUR®

TECDUR® enhanced security glass is a range of composite security products which combine the mechanical strength of polycarbonate with the abrasion resistance of glass. It is designed for use in environments such as high value retail shop windows including jewellers, designer fashion brands and electrical goods as well as banks, bookmakers, casinos and garage forecourt retailers.

LITE-WALL ISO

LITE-WALL ISO allows architects and designers alike to build entire structures out of glass, allowing design flexibility to create bright and highly attractive retail environments, with more light and a greater feeling of space.

This system is installed throughout the UK & Europe with many well-known architects, main contractors, shop fitters and end users to help provide bespoke frameless glazing for both wall, skylights and glass shopfronts.
